

Carton Filler

The PMD soft fill carton filler can operate alongside any brand weigh head. It is designed to fill cartons, trays and plastic crates.

Produce is first weighed by the weigh head then transferred to the carton filler. As produce is received, the carton filler holding chamber starts to move downward lowering the produce into the carton. The chamber lowers to within 25mm of the base of the carton, opens and withdraws, placing the produce at the bottom of the carton. The full carton indexes forward and is replaced by an empty carton.

Capacity:

Up to 13 cartons per minute, depending upon type of produce and weigh head used.

Operation:

Fully automatic, for fast efficient filling of cartons, trays and plastic crates.
